

## CARDINAL CHIT-CHAT CORNER

Brrrrr, this is winter alright! But don't you complain—think about the wild birds and wildlife that can't come inside and sit by the fire! Remember, they are not surviving on the feed we put out for them—they are living on the energy from the feed we give them. Hence the importance of good quality feed for their survival, especially the high-oil seeds such as Sunflower Seed, Safflower, NutraSaff, Peanuts, Tree nuts, hulled Sunflowers, and Nyjerseed.

Don't let your inventory run too low. With extreme winter conditions, farmers can't always deliver when it's needed, trucks get slowed down or stopped, machinery can't run at optimum capacity—particularly sunflower hulling equipment—and yet demand increases. Please order in plenty of time.
